Exp: 15 Analyse different types of Server using webalizer

~~[illegible]~~
8/10/2026

Aim:
To analyses different types of web server using webalizer web log analysis tool in fedora.

Objective:

- To understand web server log files
- To Configure webalizer for Server log analysis
- To analyze the number of hits, requests pages, files, and data transferred.
- To compare the usage stats of different web server such as Apache, Nginx and IIS

Procedure:

1. Install webalizer
   /var/log/apache2/access.log. for Nginx
1. http://localhost/webalizer.
2. Repeat Same procedure for the log file of different servers.

Result:
The webalizer tool successfully analyze web server log files and generates graphical and statistical reports. The generated report can be resource and data trafer of different web Server.
