UNDERSTANDING THE CISCO PACKET TRACER ENVIROMENT

Aim:

To understand the ciso packet tracer enviroment and design a simple computer network using its interface and networking components.

Steps:

open the csco Packet tracer application observe the user Interface, including the meny bar, Main tool bar, work space, Common tool bar, Network Component Box Common tool bar, Network Component Box and Realtime/simulation tabs.

From the Network Component Box, Select the required network device such as PCs, hub and switch

Drag and drop the devices using Copper straight-through cables

Configure IP address for the PCs using the desktop - IP configuration option. Verify that all links are active (green LED)

use the Add simple PDC tool to send packet between two PCs.

observe packet transmission in Real time mode and simulation mode. Save the network topology.

Result!

The Cisco Packet tracer environment was sucessfully explored, and a simple network was designed. The interface Component device Connection, IP Configuration and understood using both realtime and simulation modes.
