HUB AND SWITCH

Aim:

To compare the packet forward behavior of a hub and a switch using Cisco Packet tracer.

Steps:

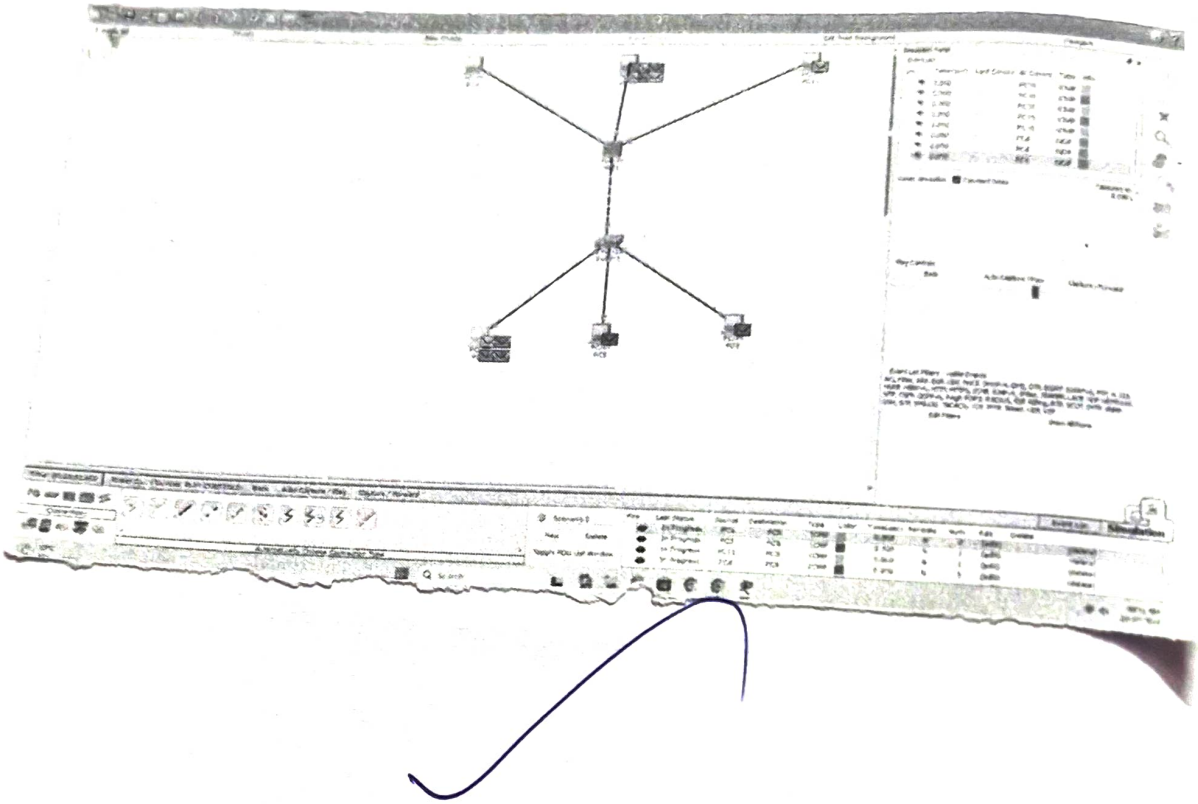

Creat the network using a hub and another using a switch each connected to 4 PCs

Configure IP address for all PCs in both networks

Send a simple PDU between two PCs in each networks

Observe packet transmission in simulation mod.

Compare web the hub and switch forward packets.

Result:

The hub broadcast Packet to all Connected device, whereas the switch forward Packet only to the intended destination therefore the Switch provides better performance, reduced network traffic and improved efficiency compared to the hub.
